

AKEEZO HEALTHCARE

User Stories & Website/Product Flow

Medical Tourism + Emergency Healthcare

1. THE AKEEZO CONCEPT

AKEEZO should not look like a traditional hospital website or a traditional medical-tourism agency.

The core proposition should be:

“Tell AKEEZO what you need. We figure out the healthcare journey.”

AKEEZO should act as a **healthcare journey coordinator** between the patient and the healthcare ecosystem.

This can include:

- Understanding the patient's medical requirement
- Identifying appropriate hospitals
- Identifying appropriate doctors/specialists
- Comparing options
- Estimating treatment costs
- Coordinating appointments
- Coordinating medical records
- Travel planning
- Visa/invitation-letter assistance where applicable
- Accommodation
- Airport transfers
- Local transportation
- Attendant/caregiver support
- Nursing/home care
- Diagnostics
- Pharmacy/medicines
- Post-treatment care
- Follow-up
- Return journey

- Emergency support

The website should therefore have two major entry points:

A. MEDICAL TOURISM

“Plan My Treatment”

B. EMERGENCY HEALTHCARE

“I Need Help Now”

These should have completely different user journeys.

2. HOMEPAGE

The homepage should immediately ask:

What do you need help with?

OPTION 1

Plan My Treatment

For patients looking for treatment, surgery, consultation, second opinion or planned healthcare in India.

CTA:

Start My Healthcare Journey

OPTION 2

I Need Emergency Help

For someone who needs urgent medical assistance at home, at a hotel, at an airport, during travel or elsewhere.

CTA:

Get Emergency Help

OPTION 3

I'm Looking for Home Healthcare

For:

- Nurse
- Caregiver
- Patient attendant
- Physiotherapy
- Doctor visit
- Post-operative care
- Elder care
- Palliative care
- Home diagnostics

CTA:

Find Care at Home

3. MEDICAL TOURISM — CORE USER STORY

User Persona

“I am a patient or family member from India or another country. I need medical treatment but I don't know which hospital, doctor, treatment option or city is best. I want someone to understand my requirement, give me suitable options, estimate my total cost and help me manage the entire journey.”

4. MEDICAL TOURISM USER JOURNEY

The journey should work like a travel booking platform.

Instead of:

Destination → Hotel → Flight

AKEEZO should work as:

Medical Need → Treatment → Hospital → Doctor → City → Cost → Travel → Stay → Treatment → Recovery → Return

STEP 1 — WHAT DO YOU NEED?

First screen:

“What brings you to AKEEZO?”

Options:

- I need a diagnosis
- I need a second opinion
- I need surgery
- I need a specialist consultation
- I need cancer treatment
- I need cardiac treatment
- I need orthopaedic treatment
- I need fertility treatment
- I need dental treatment
- I need cosmetic/plastic surgery
- I need neurological treatment
- I need organ/transplant-related care
- I need another treatment
- I'm not sure — help me decide

Also:

“Tell us briefly what is happening.”

Free-text box.

Example:

“My father has been diagnosed with a heart blockage and we are looking for treatment options in India.”

STEP 2 — UNDERSTAND THE MEDICAL REQUIREMENT

Ask only relevant questions.

Basic information:

- Patient age
- Gender
- Country
- Current city
- Diagnosis, if known
- Symptoms, if diagnosis is unknown
- Previous treatment
- Current doctor/hospital
- How urgent is the treatment?

Urgency options:

- Emergency
- Within 24–48 hours
- Within 1 week
- Within 1 month
- Planning for later
- Not sure

Medical records

Allow upload of:

- Reports
- Prescriptions
- CT/MRI
- X-rays
- Blood reports
- Biopsy reports
- Discharge summaries
- Previous medical opinions
- Photos where medically relevant

CTA:

Continue

STEP 3 — WHAT KIND OF EXPERIENCE DO YOU WANT?

This is where AKEEZO behaves like MakeMyTrip.

Ask:

“What matters most to you?”

Allow multiple selections:

- Best possible treatment
- Most experienced doctor
- NABH/JCI/accredited hospital
- Affordable treatment
- Fastest treatment
- Specific hospital
- Specific doctor
- Privacy
- Luxury/premium experience
- Shortest stay
- Family-friendly location
- English-speaking staff
- Multilingual support

This information should influence the recommendations.

STEP 4 — WHERE DO YOU WANT TO GO?

Question:

“Do you have a preferred city?”

Options:

- Delhi NCR

- Mumbai
- Chennai
- Hyderabad
- Bengaluru
- Kolkata
- Ahmedabad
- Kochi
- Jaipur
- Chandigarh
- Other
- **“I don’t know — recommend a city for me.”**

Important:

If the patient doesn’t know where to go, AKEEZO should recommend the city based on:

- Treatment availability
 - Specialist availability
 - Hospital quality
 - Cost
 - Travel connectivity
 - Accommodation
 - Expected treatment duration
-

STEP 5 — BUDGET

Ask:

“What is your approximate treatment budget?”

Options:

- Under ₹1 lakh
- ₹1–3 lakh
- ₹3–5 lakh
- ₹5–10 lakh
- ₹10–20 lakh
- ₹20–50 lakh
- ₹50 lakh+
- Not sure

Then separately ask:

“Should we optimize for treatment cost, or the best available option?”

Options:

Best Value

Best Medical Option

Premium Experience

This distinction is important.

STEP 6 — HOSPITAL PREFERENCE

Ask:

“Do you already have a hospital in mind?”

- Yes
- No

If yes:

Allow hospital search.

If no:

“Let AKEEZO recommend suitable hospitals.”

The recommendation engine can eventually show:

Hospital A

- Specialty
- Doctor availability
- Estimated treatment cost
- Expected stay
- Hospital accreditation
- Location
- Patient support

- International patient services

Hospital B

Same information.

Hospital C

Same information.

The user should be able to:

Compare Hospitals

STEP 7 — DOCTOR PREFERENCE

Ask:

“Would you like to choose your doctor?”

Options:

- Yes, I have a doctor in mind
- Recommend the best doctor
- Recommend doctors based on my budget
- I don't know — choose for me

Doctor profiles should eventually include:

- Name
- Specialty
- Sub-specialty
- Experience
- Qualifications
- Hospital
- Consultation fee
- Availability
- Languages
- Location
- Relevant expertise

CTA:

Request Consultation

STEP 8 — ESTIMATED TREATMENT COST

The patient should not only see:

Treatment Cost = ₹X

Instead show a potential healthcare journey estimate.

Example:

Estimated Treatment

Hospital/treatment:

₹4,50,000

Doctor:

₹25,000

Diagnostics:

₹30,000

Medicines:

₹20,000

Accommodation:

₹45,000

Local transportation:

₹15,000

Attendant/caregiver:

₹20,000

Estimated total:

₹6,05,000

Clearly label these as **estimates**, subject to medical evaluation and hospital confirmation.

STEP 9 — HOW LONG WILL I NEED TO STAY?

Ask:

“How long can you stay in India?”

Options:

- Less than 1 week
- 1–2 weeks
- 2–4 weeks
- 1–2 months
- 2+ months
- Not sure

AKEEZO should then show:

Estimated Healthcare Timeline

Arrival

↓

Initial consultation

↓

Diagnostics

↓

Treatment/surgery

↓

Hospital stay

↓

Recovery

↓

Follow-up

↓

Fit-to-travel assessment

↓

Return home

This is a major differentiator.

STEP 10 — TRAVEL

Once treatment is shortlisted:

“Would you like AKEEZO to help arrange your journey?”

Options:

- Flights
- Airport pickup
- Airport assistance
- Medical transportation
- Ambulance
- Local transportation
- Hotel/accommodation
- Medical-friendly accommodation

For international patients:

- Visa guidance
- Medical visa documentation support
- Invitation letter coordination where applicable
- Airport assistance
- Language assistance

AKEEZO should coordinate these services directly or through partners.

STEP 11 — ACCOMMODATION

Instead of simply recommending hotels, classify accommodation according to medical needs.

Options:

Hospital Nearby

Budget

Family Stay

Premium

Long Stay

Accessible / Mobility Friendly

Caregiver Friendly

The user should be able to select:

- Number of people
 - Number of rooms
 - Required duration
 - Wheelchair accessibility
 - Kitchen
 - Lift
 - Hospital distance
-

STEP 12 — LOCAL EXPERIENCE

This is where the MakeMyTrip-style experience becomes distinctive.

Ask:

“Would you like to explore India during your healthcare journey?”

Options:

- Yes
- No
- Only if medically permitted

Then:

“What would you like to experience?”

- Delhi
- Agra / Taj Mahal
- Jaipur
- Amritsar
- Goa
- Kerala

- Mumbai
- Other

But the system should clearly distinguish:

Medical requirement comes first.

Tourism should be recommended only around the medical schedule and patient's condition.

Example:

"Your estimated treatment and recovery period is 18–21 days. Based on your medical schedule, AKEEZO recommends a 2-day family visit to Agra after your doctor confirms you are fit to travel."

This can become a powerful AKEEZO feature.

STEP 13 — FAMILY / ATTENDANT REQUIREMENT

Ask:

"Will someone accompany the patient?"

- Yes
- No
- Not sure

If yes:

- Number of attendants
- Accommodation
- Transportation
- Food
- Local assistance
- Translator
- Caregiver

Also ask:

"Will the patient require assistance after discharge?"

- Nurse
- Patient attendant
- Physiotherapist
- Doctor visits
- Medical equipment
- Medication management
- None
- Not sure

This connects Medical Tourism directly to AKEEZO Home Healthcare.

STEP 14 — LANGUAGE

Ask:

“What language would you prefer?”

- English
- Hindi
- Arabic
- French
- Swahili
- Russian
- Bengali
- Tamil
- Telugu
- Other

This becomes especially useful for international patients.

STEP 15 — FINAL SUMMARY

Before submitting:

“Here is your AKEEZO Healthcare Plan”

Show:

Patient

Age / Country / Medical requirement

Treatment

Requested treatment

Preferred city

Delhi NCR

Hospital

Hospital option

Doctor

Doctor option

Estimated treatment cost

₹X–₹Y

Estimated stay

X–X days

Accommodation

Selected option

Transportation

Selected option

Attendant

Selected option

Additional services

Translator / Visa assistance / Diagnostics etc.

Then:

“Would you like AKEEZO to create your personalized treatment plan?”

CTA:

GET MY AKEEZO PLAN

5. AFTER LEAD SUBMISSION

The patient should receive:

“Your AKEEZO Healthcare Request has been received.”

Give them a unique:

AKEEZO Patient Journey ID

Example:

AKZ-IND-000123

The patient should then have a dashboard.

6. PATIENT DASHBOARD

The dashboard should eventually show:

My Healthcare Journey

1. Medical Assessment

Completed

2. Hospital Selection

2 options received

3. Doctor

Awaiting confirmation

4. Treatment Estimate

Received

5. Appointment

Pending

6. Travel

Pending

7. Accommodation

Pending

8. Treatment

Upcoming

9. Recovery

Pending

10. Return Journey

Pending

This turns AKEEZO from a lead-generation website into a **healthcare journey platform**.

7. EMERGENCY HEALTHCARE — COMPLETELY DIFFERENT USER STORY

The emergency journey must be much faster.

The user may be:

- A patient
- Family member
- Hotel
- Airport
- Company
- School
- Travel agent
- Foreign embassy/organization
- Hospital
- Insurance company

The key principle:

DON'T MAKE AN EMERGENCY PATIENT FILL A LONG FORM.

8. EMERGENCY HOMEPAGE

Large prominent button:

I NEED EMERGENCY HELP

Under it:

“Tell us where you are and what happened. We’ll help coordinate the next step.”

CTA:

GET HELP NOW

9. EMERGENCY STEP 1 — LOCATION

First question:

“Where is the patient?”

Allow:

Use My Current Location

or manually enter:

- Address
- Landmark
- Hotel

- Airport
- Railway station
- Office
- Home

The system should capture GPS location when permitted.

10. EMERGENCY STEP 2 — WHAT HAPPENED?

Keep it extremely simple.

What happened?

- Accident
- Chest pain
- Difficulty breathing
- Unconscious
- Severe bleeding
- Stroke symptoms
- Seizure
- Severe allergic reaction
- Burn
- Poisoning
- Pregnancy-related emergency
- Fall/injury
- Fever/illness
- Other
- **I don't know**

Also:

“Is the patient conscious?”

YES / NO / NOT SURE

And:

“Is the patient breathing normally?”

YES / NO / NOT SURE

11. EMERGENCY STEP 3 — WHAT HELP IS REQUIRED?

Options:

- Ambulance
- Doctor
- Nurse
- Emergency medical team
- First-aid assistance
- Hospital coordination
- Emergency room coordination
- Medical transport
- Airport medical assistance
- Hotel emergency assistance
- Not sure

The default should be:

“I’M NOT SURE — HELP ME.”

12. EMERGENCY STEP 4 — CONTACT

Only collect essential information initially:

- Name
- Mobile number
- Patient name
- Relationship to patient

Do NOT make users enter unnecessary information before help begins.

CTA:

CONNECT ME TO AKEEZO

13. EMERGENCY RESPONSE FLOW

Once an emergency request is submitted:

AKEEZO Emergency Control Desk

The internal dashboard should immediately receive:

EMERGENCY REQUEST

Patient:

Name

Location:

GPS/address

Problem:

Chest pain

Conscious:

Yes

Breathing:

Yes

Requester:

Family member

Time:

12:42 PM

14. AKEEZO EMERGENCY OPERATIONS

The internal team should be able to:

STEP 1

Call the requester immediately.

STEP 2

Assess the situation using an approved emergency triage protocol.

STEP 3

Coordinate appropriate emergency response.

Depending on the case:

- Ambulance
- EMS
- Doctor
- Nurse
- Nearby hospital
- Emergency department
- Air/ground medical transport where appropriate

STEP 4

Share the patient's location.

STEP 5

Identify suitable receiving hospital where needed.

STEP 6

Coordinate hospital admission / emergency department arrival.

STEP 7

Keep family informed.

15. EMERGENCY LIVE TRACKING

Where technically possible:

“Your AKEEZO Emergency Request”

Request received ✓

Team contacted ✓

Ambulance assigned ✓

Ambulance en route ✓

Estimated arrival: XX minutes

Hospital identified ✓

Patient arrived ✓

Handover completed ✓

This should eventually work similar to a ride-hailing experience.

16. EMERGENCY FAMILY DASHBOARD

The family member should be able to see:

- Current status
- Assigned service provider
- Contact details
- Location
- ETA
- Hospital
- Documents
- Medical updates
- Payment status

Where appropriate and legally permissible.

17. POST-EMERGENCY SUPPORT

This is where AKEEZO can differentiate itself.

After the emergency:

“Does the patient need support after hospital care?”

Options:

- Home nurse
- Patient attendant
- Physiotherapist
- Doctor home visit
- Diagnostics
- Medicines
- Medical equipment
- Elder care
- Post-operative care
- Rehabilitation
- Follow-up appointment
- Hospital coordination

CTA:

CONTINUE CARE WITH AKEEZO

This creates a complete:

Emergency → Hospital → Home → Recovery

ecosystem.

18. INTERNATIONAL EMERGENCY CARE

This should be a separate option:

“Are you travelling in India and facing a medical emergency?”

Examples:

- Tourist
- Business traveller
- International student

- Expat
- Foreign patient
- Embassy/organization
- Hotel guest

Features:

24/7 Emergency Assistance

Potential services:

- Emergency coordination
 - Ambulance
 - Hospital coordination
 - Translation/interpreter
 - Insurance coordination
 - Family communication
 - Airport assistance
 - Medical transportation
 - Medical documentation
 - Follow-up care
 - Return-home coordination
-

19. B2B EMERGENCY PORTAL

AKEEZO should eventually have a separate B2B offering.

Target customers:

Hotels

“Protect your guests with AKEEZO Emergency Assistance.”

Corporates

“Emergency healthcare support for employees.”

Travel Agencies

“Healthcare assistance for your travellers.”

Airlines / Airports

“Emergency medical coordination.”

Embassies

“Medical assistance for nationals in India.”

Insurance / TPAs

“Healthcare coordination and assistance.”

International Medical Tourism Agents

“Your healthcare partner in India.”

The B2B user should have:

LOGIN → RAISE CASE → TRACK CASE → DOCUMENTATION → BILLING

20. INTERNATIONAL MEDICAL TOURISM AGENT PORTAL

This should become an important AKEEZO product.

An international agent logs in.

They can:

Create Patient

Name

Country

Diagnosis

Treatment required

Budget

Preferred city

Upload medical records.

Then:

REQUEST HOSPITAL OPTIONS

AKEEZO responds with:

- Hospital options
- Doctor options
- Estimated treatment cost
- Expected duration
- Appointment availability
- Required documents
- Travel requirements
- Accommodation options

Agent can then share the proposal with their patient.

This makes AKEEZO effectively:

“Healthcare infrastructure in India-as-a-service for international agents.”

21. WEBSITE NAVIGATION

Recommended top navigation:

HOME

MEDICAL TOURISM

- Find Treatment
- Find Hospital
- Find Doctor
- Treatment Cost
- International Patients
- Patient Journey

EMERGENCY

- Emergency Assistance
- Ambulance

- Hospital Coordination
- Travel Emergency

HOME HEALTHCARE

- Nurses
- Caregivers
- Patient Attendants
- Physiotherapy
- Doctor Visits
- Post-operative Care
- Elder Care

FOR PARTNERS

- Hospitals
- International Agents
- Hotels
- Corporates
- Insurance/TPA
- Embassies

ABOUT AKEEZO

CONTACT

And permanently visible:

EMERGENCY HELP

22. THE MOST IMPORTANT UX PRINCIPLE

There should be **two completely different experiences**.

MEDICAL TOURISM

Patient has time.

Therefore:

DISCOVER → COMPARE → PLAN → BOOK → TRAVEL → TREAT → RECOVER

The interface can be detailed and personalized.

EMERGENCY

Patient does NOT have time.

Therefore:

LOCATE → UNDERSTAND → CONNECT → RESPOND → TRANSPORT → HOSPITAL → FOLLOW-UP

Minimal questions.

Maximum speed.

23. AKEEZO'S LONG-TERM PRODUCT VISION

The ultimate AKEEZO platform can become:

BEFORE CARE

Medical Tourism
Second Opinions
Doctor Discovery
Hospital Discovery
Cost Estimates
Travel Planning

↓

DURING CARE

Appointments
Diagnostics
Hospitalization

Ambulance
Emergency Assistance
Patient Coordination
Translation
Insurance/TPA

AFTER CARE

Home Nursing
Patient Attendants
Physiotherapy
Medicines
Diagnostics
Rehabilitation
Follow-up
Elder Care

CONTINUOUS CARE

Patient Health Profile
Medical Records
Follow-ups
Family Dashboard
Emergency Assistance

24. MVP — WHAT THE WEBSITE DEVELOPER SHOULD BUILD FIRST

Do NOT try to build the entire platform on Day 1.

PHASE 1 — WEBSITE

Build:

1. Homepage
2. Medical Tourism journey

3. Emergency Help journey
4. Home Healthcare journey
5. Lead/Case submission
6. Medical document upload
7. WhatsApp integration
8. Call button
9. Admin dashboard
10. Basic CRM/case management

PHASE 2

Build:

1. Patient dashboard
2. Hospital comparison
3. Doctor profiles
4. Treatment estimates
5. Appointment tracking
6. Agent portal
7. Partner portal
8. Payment integration
9. Notifications
10. Case tracking

PHASE 3

Build:

1. AI-assisted medical requirement intake
2. Hospital/doctor recommendation engine
3. Dynamic treatment journey
4. Emergency dispatch integration
5. Live ambulance tracking
6. International agent marketplace
7. Patient digital health record
8. Insurance integration
9. Travel/accommodation integration
10. Full AKEEZO healthcare marketplace

25. THE ONE-LINE PRODUCT DEFINITION

The developer should understand AKEEZO as:

“A healthcare journey platform that helps patients discover, plan, access and coordinate healthcare — from emergency assistance and hospital care to medical tourism and recovery at home.”

26. THE FUTURE AKEEZO EXPERIENCE

A patient should eventually be able to come to AKEEZO and simply say:

“My mother has been diagnosed with breast cancer. We live in Kenya. Our budget is ₹8–10 lakh. We want the best possible treatment in India. I don’t know which hospital or doctor to choose. We need accommodation for two people and someone to help us locally.”

AKEEZO should be able to turn that single request into:

Medical assessment → Suitable hospitals → Suitable doctors → Treatment estimates → Consultation → Visa assistance → Flight → Airport pickup → Hotel → Hospital → Diagnostics → Treatment → Attendant → Recovery → Follow-up → Return home

That is the product you should ultimately build.

For emergencies, the equivalent should be:

“My father has collapsed. We are at a hotel in Delhi.”

AKEEZO should immediately move into:

Location → Emergency assessment → Appropriate emergency response → Hospital → Family coordination → Post-hospital care

The strategic difference is:

Medical Tourism = PLAN THE JOURNEY.

Emergency Healthcare = ACT NOW.

**AKEEZO = COORDINATE THE CARE
JOURNEY.**
